Assignment 3: Library Management System

You will build a command-line program that a small library can use to manage its books.

Requirements

1. The program must let a librarian add, edit and remove books.
2. Each book must have a title, an author, an ISBN and a number of copies.
3. Members must be able to borrow and return books.
4. The program must refuse a loan when no copies are left.
5. The program should show the list of overdue loans.
6. Data must be saved to a file so that it is kept after the program closes.

Constraints

- Write the program in Java 17.
- Store the data in a CSV or JSON file, not in a database.

Submission

- Submit the source code as a ZIP file.
- Submit a user guide of at most three pages.

Criterion	Marks
Book management	10
Borrowing and returning	10
Saving data	5
User guide	5

Total: 30 marks
